DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-4 and 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yasutoshi et al. (JP 04-253769, English Translation).

Please note that this rejection is the result of the English Translation of this document obtained by the examiner. All paragraphs cited refer to the English Translation.

For claims 1, 4, and 7, Yasutoshi teaches compositions containing 100 parts by weight of a diorganopolysiloxane terminated with hydroxyl groups, 1-25 parts of an organosilane having at least three hydrolyzable groups, and 0.01-5 parts by weight of an organic sulfur compound. See paragraphs [0013]-[0016] and [0019]. For claims 1 and 6, Yasutoshi teaches the presence of a curing catalyst that includes metal salts of carboxylic acids. See paragraph [0014].

For claims 2 and 3, Yasutoshi discloses that the diorganopolysiloxane contains alkyl groups and that the viscosity is preferably between 1000-100,000 centistokes. Paragraph [0008]. The viscosity range appears to be consistent with n values between 100 and 1000.

For claims 1, 8, and 9, Yasutoshi teaches that the sulfur compound is an organomercaptan, which contains a thiol group. Paragraph [0016]. Here, Yasutoshi teaches saturated mercaptans, specifically preferring those containing 18 carbon atoms. As suggested by the reference, it would have been obvious to one of ordinary skill in the art at the time of the invention to use octadecane thiol as the organo mercaptan since this compound is a saturated mercaptan of 18 carbon atoms.

Allowable Subject Matter

5. Claims 10-12 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments filed 9/13/05 have been fully considered but they are not persuasive. As a result of the translation, the examiner's position is that the recitation of octadecane thiol in claims 1, 8, and 9 is suggested by the reference. Therefore, the above rejection has been set forth. The examiner apologizes for any inconvenience.
